User prompt: how people can di e-transfer to my td accout

Response: To receive an Interac e-Transfer into your TD account, people just need your **email address** or **Canadian mobile phone number**. You do not need to give them your actual bank account or transit numbers.

Depending on how you have your account set up, there are two ways the transfer will happen:

Option 1: Automatic Deposit (Recommended)

If you set up **Autodeposit**, you don't need to answer security questions, and the money goes straight into your TD account automatically.

How to set up Autodeposit on the TD App:

1. Open the TD app and log in.
2. Tap **Move Money** on the navigation bar.
3. Select **Interac e-Transfer**, then go to the **Manage** tab.
4. Select **Manage Autodeposit** and enter your email address.
5. Choose which TD bank account you want the money deposited into.
6. Confirm the setup via the confirmation email Interac sends you within 24 hours.

Once active, whenever someone sends money to that email address, it deposits directly into your chosen TD account.

Option 2: Standard Transfer (Using a Security Question)

If you do not have Autodeposit turned on, the sender will need to set up a security question and answer when they send you the funds.

1. The sender initiates the e-Transfer using your email or mobile number and creates a security question.
2. You will receive an email or text notification from Interac stating that money has been sent to you.

3. Click the link in the notification message, which will direct you to a secure page to select your financial institution (**TD Canada Trust**).
4. Log into TD EasyWeb or the TD app when prompted, answer the security question correctly, and choose the account you want to deposit the funds into.
